ABSTRACT

In the Center for Opto-Electronic Systems Research at the University of Rochester, the primary goal of the faculty is to contribute fundamental scientific knowledge in the critical technology areas of lasers, modulation, optical system design, propagation and coherence, detection theory, signal and image processing, switching, neural networks, and displays. This research impacts on the following topics enumerated in the DoD critical technologies list: Photonics; Signal Processing; Passive Sensors; Software Producibility; and, to a lesser extent, Signature Control; Sensitive Radars; and Machine Intelligence or Robotics. Research in optics and photonics is inherently broad and encompassing, and significant positive influence can be anticipated across a major sector of our economy, as follows: (a) defense systems, (b) factory and office automation, and (c) communications. In addition to the normal emphasis on refereed publications in the open literature, the nine (9) faculty principals also plan to continue an extensive, successful, innovative program of technology transfer with the appropriate Army laboratories, including seminars, workshops, joint research, and long-term working visits. Furthermore, under the URI program, block funding has enabled us to educate a large number of superior doctoral scholars in a unique environment. This environment includes an eminent, cross-disciplinary faculty, an unexcelled capital facility in electrooptics, and industrial interactions with two major local corporations (Xerox and Eastman Kodak) as well as 25 U.S. corporations who are actively engaged in all aspects of photonics. This program of research is also provided at a reasonable cost to ARO due to substantial cost-sharing and careful management by the University of Rochester.

ARO-URI CENTER FOR
OPTO-ELECTRONIC SYSTEMS RESEARCH

SCIENTIFIC PERSONNEL

Nicholas George Director, ARO-URI Center for Opto-Electronic Systems Research; Wilson Professor of Electronic Imaging; and Professor of Optics and Professor of Electrical Engineering (Ph.D. Electrical Engineering and Physics, California Institute of Technology; M.S. University of Maryland; B.S. University of California, Berkeley)

Novel electronic imaging systems for automatic pattern recognition, imaging through turbulence, fog and smoke, and true-height contour holograms; sub-resolution in color scanning and printing, include dithering and compression

Robert W. Boyd Associate Director, ARO-URI Center for Opto-Electronic Systems Research and Professor of Optics (Ph.D. Physics, University of California, Berkeley; B.S. Physics, Massachusetts Institute of Technology)

Development of nonlinear optical materials, especially composite materials; applications of nonlinear optics, including optical power limiters, phase conjugate mirrors, optical fiber devices, frequency conversion devices, and optical amplifiers

Govind P. Agrawal Professor of Optics (Ph.D. and M.S., Indian Institute of Technology, New Delhi, India)

Femtosecond dynamics of semiconductor lasers; feedback induced enhancement of laser noise; soliton amplification and generation in doped fibers; spatio-temporal coupling in nonlinear media and its role in mode locking Ti:sapphire lasers

Dennis G. Hall Director of The Institute of Optics and William F. May Professor of Optics (Ph.D. Physics, University of Tennessee; B.S. Physics, University of Illinois, Urbana-Champaign)

Semiconductor opto-electronics; broad area, surface-emitting semiconductor lasers

SCIENTIFIC PERSONNEL (CONTINUED)

Susan Houde-Walter Professor of Optics
(Ph.D. and M.S. Optics, University of Rochester; B.A., Sarah Lawrence College)

Optoelectronic materials and design: III-V semiconductors, optical glass, design methods for monolithic integration of optoelectronics

Stephen D. Jacobs Associate Professor of Optics and Senior Scientist at the Laboratory for Laser Energetics
(Ph.D. Optics, University of Rochester)

Polymer liquid crystal flake inks for applications, including reflective paints and pigments, friend/foe discrimination

G. Michael Morris Professor of Optics
(Ph.D. and M.S. Electrical Engineering, California Institute of Technology; B.S. Engineering Physics, University of Oklahoma)

Diffraction optics technology, including optical system design, manufacture of diffractive structures, and subwavelength structured surfaces

Carlos R. Stroud Professor of Optics
(Ph.D. Physics, Washington University; A.B. Physics and Mathematics, Centre College)

Quantum electronics with ultrashort laser pulses, remote sensing with modulated laser fields

Emil Wolf Wilson Professor of Optical Physics, Professor of Physics and Professor of Optics
(Ph.D., Bristol; D.Sc. Edinburgh)

Structure of the focal region; inverse problems, especially diffraction tomography and super-resolution; theory of partial coherence, with applications to radiometry and spectroscopy

ARO-URI Ph.D. FELLOWS

The ARO-URI Center for Opto-Electronic Systems Research was established to contribute fundamental knowledge in the key technology areas of signal processing and image understanding, sources and sensors, and optical system design. A primary goal of the Center has been the education of outstanding Ph.D. graduate students through its affiliation with The Institute of Optics. To date, sixty Ph.D. Fellows have been supported since the beginning of the ARO-URI Center Program (1988). Of those, fifty have completed their theses and ten are in the process of finishing. This section contains a listing of the Ph.D. Fellows. Their thesis title is given along with their advisor and the year the thesis was completed or is expected. For those Fellows who have graduated, we also include their current location.
